

# IDEALS at the University Of Illinois: A Case Study of Integration Between an IR and Library Discovery Systems

Sarah L. Shreeves

University of Illinois at Urbana-Champaign

NISO Webinar: From ILS to Repository and Back: Data Interoperability  
January 13, 2009

# Outline

- Basic interoperability/integration issues for IRs
- IDEALS background, collection policy, metadata policy
- Interactions with library systems
- Challenges and areas for further work

# Issues in the IR environment

- Large range of types and granularity of material from diverse disciplines
- Reliance on author deposit and description – tension between ease of deposit and full description
- Reliance on full text indexing / discovery via Google and other search engines
- Limited resources for technical development and resource description

## Quick Facts:

- Joint initiative of Library and CITES (central IT)
- DSpace platform (1.5.2)
- Over 13,000 items
- Over 1.2 million downloads since July 2007
- Some representation from about 70% of colleges on campus (note: not faculty)
- Most material from physical sciences, agricultural sciences, library and information science, social sciences
- Faculty, researchers, graduate students can deposit at any time

## Welcome to IDEALS

[See the top downloads of 2009!](#)

IDEALS collects, disseminates, and provides persistent and reliable access to the research and scholarship of faculty, staff, and students at the University of Illinois at Urbana-Champaign. Faculty, staff, and graduate students can deposit their research and scholarship - unpublished and, in many cases, published - directly into IDEALS. Departments can use IDEALS to distribute their working papers, technical reports, or other research material. Contact Sarah Shreeves, IDEALS Coordinator, for more information.

## THE ORIGINS OF PRIVATE OWNERSHIP OF LAND IN EGYPT: A REAPPRAISAL

In the historiography of Egypt it has long been accepted that private ownership of land was introduced in the nineteenth century.<sup>1</sup> This development in statute law has often been linked analytically to a process of "modernization."<sup>2</sup> Modernization theory posits a fundamental dichotomy between two ideal-type societies, the traditional and modern, which implies an equally sharp discontinuity between historical eras: before and after the beginning of modernization. In this view, traditional societies lack the potential for generating significant social change from within. Change results rather from the expansion of communications and diversification of technology worldwide from modern Europe and North America. In the process of modernization, traditional norms and structures break down in the host societies, and new, rational values and institutions emerge in their place. The development of Egypt's new land regime is usually considered one such change.

In most historical studies to date, the impact of Europe and/or the rise of powerful reformers at the beginning of the nineteenth century are the most synthetic of Muhammad Ali Pasha's examination of the country but its own their dynamic evolutions.<sup>3</sup> This calls relationship to Egypt.

THE TRANSFORM  
Century to the  
property relations  
and had led to the

## Changing Times: Changing Libraries

Also audio, video, software, undergraduate research

# Scholarship and Research

**What of this content would traditionally appear in library discovery systems?**

**What SHOULD appear in library discovery systems?**

**Also audio, video, software**

# IDEALS Metadata Policy

<http://services.ideals.illinois.edu/wiki/bin/view/IDEALS/MetadataPolicy>

- Use Qualified Dublin Core – out of the box Dspace with few corrections / additions
- Very few required fields: title, date of publication, a subject keyword, type of publication
- No built-in controlled vocabularies / authority control but some help provided during deposit process
- Enforce a few encoding schemes for date, language, type

Label in Deposit Interface	Metadata Element	Depositor or Software Supplied	Recommendation for Use	Repeatable?	Free Text/Controlled	Display Label
Title	dc.title	Depositor Supplied	Required. The main title of the resource. An additional title may also be supplied (for example, a translation).	Yes, depositor may supply alternate title	Free text	Title
Date Published / Disseminated	dc.date.issued	Depositor supplied	Required. Date of publication or first public distribution.	No	Controlled	Issue Date

# Wide Range of Metadata Quality

<b>Title:</b>	Colin Mochrie vs. Jesus H. Christ: Messages About Masculinities and Fame in Online Video Conversations
<b>Authors:</b>	Kendall, Lori
<b>Keywords:</b>	video masculinities persistent conversation animation
<b>Issue Date:</b>	2007-Jan-7
<b>Publisher:</b>	IEEE
<b>Citation Information:</b>	hicss, p. 76b, 40th Annual Hawaii International Conference on System Sciences (HICSS'07), 2007
<b>Abstract / Summary:</b>	With the availability of relatively easy-to-use tools for online video creation and distribution, people are increasingly producing videos not just for artistic expression, but also as a form of communication. This article examines two types of online video conversations, one within a specific online subculture, and one a series of responses to one particularly wellknown video. Videos lend themselves to the expression of ambiguity, contradictory meanings, taboo topics, and emotions. Within these two video conversations, topics include discussions of masculinity, identity, and fame.

**Title:** 3D scene modeling for Distributed Video Coding

**Authors:** Maitre, Matthieu  
Guillemot, Christine  
Morin, Luce

**Keywords:** Video coding  
Stereo vision

**Issue Date:** 2006-Oct

**Publisher:** IEEE

**Citation Information:** International Conference on Image Processing (ICIP)

**Abstract / Summary:** The compression efficiency of Distributed Video-Coding (DVC) suffers from the necessity of transmitting a large number of key-frames which are intra-coded. This paper describes a new 3D model-based DVC approach which reduces the keyframe frequency. The decoder first recovers a 3D model from the key-frames. It then predicts the intermediate frames by projecting it onto 2D image planes and applying image-based rendering techniques. This paper also introduces a new quasi-DVC method relying on a limited point tracking at the encoder. It greatly improves the prediction PSNR, while only slightly increasing the encoder complexity. It also allows the encoder to adaptively select the key-frames based on the video motion-content.

# Interactions/Integration with Library Discovery Systems

# Example One:

## Digitized Monographic Type Material

- Transform MARC records into QDC for IDEALS
  - Standard mapping using XSLT
  - Always include Bib ID and OCLC Identifier
  - Do not use all information in MARC record (physical description, for example)
  - Include extra information – notably copyright
- Pushing Handles (persistent links) back to OPAC
  - Use Bibliographic ID to generate regular report
  - Cataloging and Metadata staff update MARC records
- Show up in downstream applications like WorldCat

## Illinois Classical Studies

*Illinois Classical Studies* (ISSN: 0363-1923) was founded in 1976. Every journal worth its salt bears the stamp both of its editors and of its intellectual home (if it is fortunate enough to have one). Like its home department, and reflecting the magnificent [Classics Library](#) at the University of Illinois, *ICS* represents Classical philology in the broadest and most inclusive sense. Its editors have come from diverse intellectual traditions, European, English, and American. All journals pay regular attention to the center. *ICS* has also taken care of the margins and highlighted areas where work needs to be done. All periods and many often-neglected disciplines have been represented. *ICS*, for example, has included work on the history of Classical scholarship, Sanskrit, Coptic, Arabic, contact between the Greco-Roman and the Judaic worlds, textual criticism, patristics, papyrology, and the reception of the Classics in the Renaissance. On some occasions volumes have been dedicated to unified themes (e.g. Greek Philosophy, Euripides, Latin Poetry, Byzantium). *ICS* has indeed showcased "local talent" some of the work of a leading Classics Dept. and its alumni, but it also (unusually for an American journal) regularly publishes articles of European scholars in their native tongues. The journal has been different things at different times: it has published unsolicited submissions, solicited submissions, and, from time to time, published the edited proceedings of conferences.

<b>Title:</b>	The Bright, Bleak Future of American Magazines
<b>Author(s):</b>	<a href="#">Peterson, Theodore</a>
<b>Subject(s):</b>	<a href="#">Serials control systems</a>
<b>Abstract:</b>	<p>On Friday, January 19, 1969, Martin S. Ackerman, who professedly had come to the presidency of the Curtis Publishing Company as savior, announced that the Saturday Evening Post would cease publication with its February 8, 1969, issue. The mourners came solemnly to the funeral, and there were obituaries and euologies galore. Since countless clinicians have already performed autopsies on Benjamin Franklin's illegitimate offspring, this is not the occasion to speculate in detail about why the magazine died. Yet if one is to assess the future of American magazines, it does seem important to put the death of the Saturday Evening Post in perspective, especially since at its death some people heard the ominous tolling of John Donne's churchbell tolling not just for the Post but for all magazines. Certainly the death of the Saturday Evening Post should remind us of the essential mortality of all magazines. Many of the magazines that led in circulation, advertising and prestige preceded the Post in death. And in the same month that the Post died, American Builder slipped quietly into the grave. Eight years earlier, American Builder had been its publisher's number one magazine, and only the previous November it had observed its hundredth anniversary. In April, 1969, Western Farm Life died at age seventy-one. In April, too, the Hearst</p>

# Challenges / Areas for further work

- What metadata should go where?
- Differences in quality, granularity, and needs
- Lack of organizational coordination – big library, very decentralized
- Lack of infrastructure to ease integration – author identifiers for example
- Need to do better tracking of where people are coming from – does it matter?
